IDEAS PROVEN AT 18,000 BPH NOW HELP THE MEDIUM SIZE PRINTER AND BINDER

## THE 2000 FEEDER EASIER TO OPERATE FASTER TO SET-UP

#### **NEW INFEED SET-UP GAUGE**

takes the guesswork out of infeed settings... makes changeover fast and accurate. Just position the gauge -check that everything lines up correctly, and the infeed is ready to go!

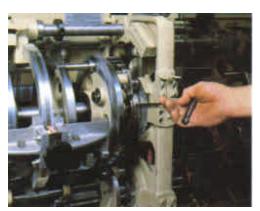

#### **EASIER LOADING**

with over 50% more infeed capacity
Signatures stand upright in a long, gently
curved pile - making loading more
convenient and faster. Since more
signatures can be loaded at onetime, one
person can handle more stations with less
effort.

#### QUICK-CHANGE CLUTCH LEVER

times each two feeders in a single movement. Also turns feeders off when not needed. No tools - no time consuming adjustment. Feeders are also protected by overload clutch.

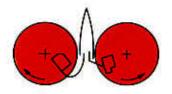

#### SIMPLE, POSITIVE FEEDER MAKEREADY

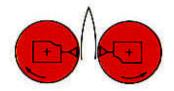

All adjustments are positioned up front, with large, easy-to-see calibration for accurate, positive setting. New signature changeover takes seconds. And all adjustments are positively locked.

## MCCAINS FAMOUS 6-WAY FEEDER IS DESIGNED TO HANDLE EVEN THE TOUGH JOBS AT HIGH SPEEDS

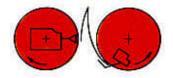

Only the McCain 6 way feeder is capable of these versatile opening actions. Vacuum and mechanical grippers combine to open any feedable signature smoothly and quickly, then drop it accurately on height adjustable, hardened steel gathering chains.

## NORMAL LAP Lap grippers take long leg. Opening gripper digs for short leg.

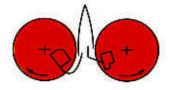

NORMAL VACUUM Lap sucker takes one leg. Opening sucker takes other leg.

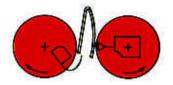

## POST CARD IN BACK OF BOOK

Lap gripper holds the card, opening sucker is raised to meet flap.

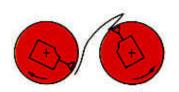

#### **LOW-FOLIO LAP**

Lap grippers take short leg. Opening gripper takes long leg.

### PARALLEL FOLD NO-LAP

Center sucker takes closed edge.
Opening gripper gets open edge.

## POST CARD IN FRONT OF BOOK

Lap gripper passes card to opposite sucker, lap sucker meets flap.

## McCAIN'S RIGID, HEAVY-DUTY CALIPER STAYS ACCURATE AT

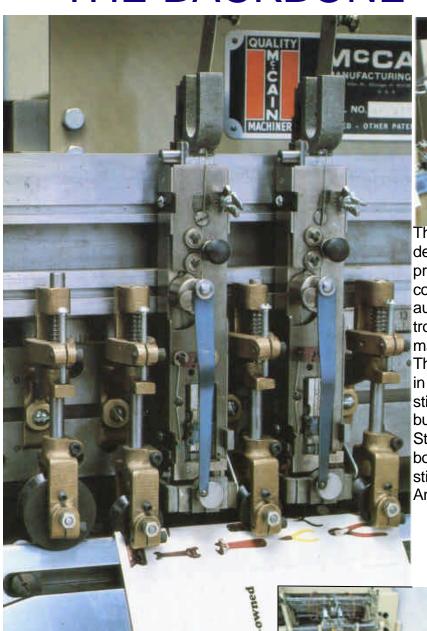

HIGH SPEEDS

The McCain 2000 has a Rigid Heavy-Duty Caliper capable of sensitive readings even at high speeds. It can detect an extra or missing 4-page signature in thick books, even sense a missing postcard. It is designed to read anywhere along the book, and with a special electronic circuit that can detect signatures misaligned as little as 1 4" away from the collecting pin. Imperfect books - even books out of jog - are rejected without being

stitched. Twin light indicators are set by a single adjustment knob for simple quick thickness adjustment.

# McCAIN'S PROVEN "TROUBLE-FREE" STITCHER IS THE BACKBONE OF THE 2000

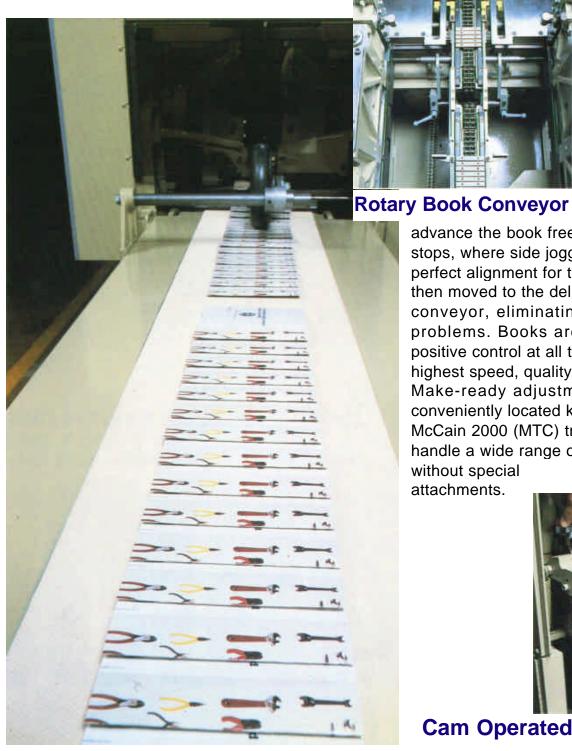

The Speedbinder stitcher is protected by jam detectors, overload spring and clutching to prevent costly damage and downtime. It's constructed with 80 sealed bearings and has an automatic lubrication system for smooth, trouble-free operation with minimum maintenance.

The gripper bar slide track holds gripper posts in perfect alignment for complete control of stitch placement. This unique gripper bar has built-in wear adjustment for continued accuracy. Stitches can be staggered for flatter stacking of books. Holds up to 8 stitching heads - can set stitches as close as 1-7 8" on centers. An 18D head stitcher can be furnished.

The 2000 trimmer infeed has twin moving tapes that minimize friction, drag and book distortion. Books move with a steady motion and minimum spacing between books for lowest travel speed. Chain driven lugs carry the book into proper position for exact front cut register by two overhead pushers.

## POSITIVE CONTROL, ABSOLUTE POSITIONING, AND CLAMPING ASSURE A SQUARE, EVEN CUT

tioned for the front cut, McCain's new tripleaction clamp smoothes the book - first at the backbone, then middle, and then front for a clean, straight cut. The book is then moved to the head/foot cut position by a rotary book conveyor. The bottom pushers

After the book is posi-

advance the book freely against the back stops, where side joggers make sure of perfect alignment for the final trim. Books are then moved to the delivery table by a second conveyor, eliminating normal marking problems. Books are under complete and positive control at all times, so that even at highest speed, quality remains constant. Make-ready adjustments are made by conveniently located knobs and levers. The McCain 2000 (MTC) trimmer is designed to handle a wide range of sizes (down to 3" x 6") without special

attachments.

**Cam Operated Flattener Clamp** 

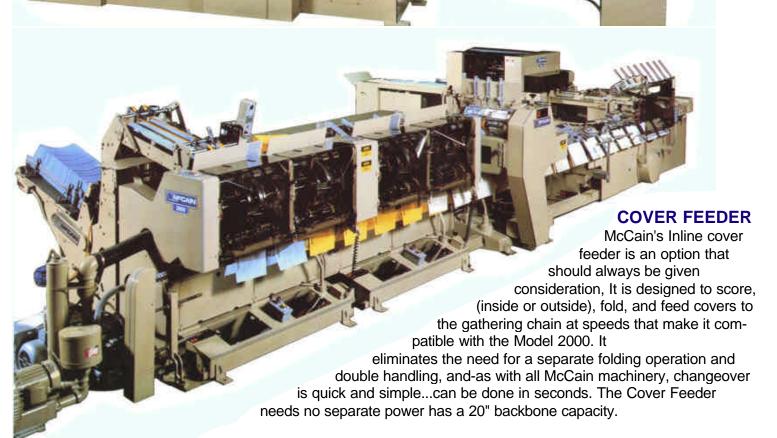

## **McCAIN**

No matter how you look at it, you just can't find a faster, more versatile, better built saddlebinder for the money.

#### **FINISHED SIZE SPECIFICATIONS:**

Maximum Trim Size 11-3/4" x 19" Minimum Trim Size: 3" x 6" Thickness 4 pp to 1/2"

Inline mailing, counter separator table and counter stacking are available options.

Other 2000 accessories include the McCain Universal Signature Loader (MUSE) shown at the infeed of first feeder. If automatically separates signatures, shingles them and delivers a continuous stream to the saddle binder infeed. A 4-45, trimmer attachment, 4th and 4th and 5th knife that makes either Chop Cut or Punch Cut for 2-up work is also available
